i) Company / Client Background

In this project, we are collaborating with Lembaga Kemajuan Pertanian Kemubu, an agency working under the Ministry of Agriculture and Food Security. Their mission is to promote the economic and social progress of farmers in the Kemubu region. Our client, Koperasi Kakitangan KADA Kelantan Berhad, operates as a subsidiary of this agency. For inquiries, both our client and the agency can be reached at 609-7447088. Our interview was with Mr. Ahmad Rohailin bin Hani, who holds a key role.

Currently, the cooperative uses a paper-based process for member registration, loan applications, and member financial statement issuance. Therefore, implementing a new system for the company will be crucial in reducing the burden on human resources and enhancing overall efficiency.

ii) Problem Background

The registration system at KADA company is currently handled manually, showing signs of low efficiency and productivity, as described below. Even though it offers only a limited number of essential services and features, there is room for improvement. Recognizing the constraints of the existing system emphasizes the necessity for a complete overhaul to enhance the system. Moving towards a new system could greatly elevate their services and features. This new system will bring about automation, streamlined processes, an improved website for better performance, and an expanded array of services for users.

1. Insufficient registration process

In the current system, all registration procedures are manually processed, like customers filling out paper forms to register and staff handling each form individually. Personal information, both private and sensitive, is predominantly stored in hard copies during registration. This method not only poses security risks but also makes it challenging to retrieve or locate information when necessary. Additionally, the registration papers require further collection, rearrangement and scrutiny by staff at the end. It really takes much more time than doing the registration online.

2. Inconvenient Status Checking

In the existing process, members are unable to check the status directly, they must either call or wait for an email from the company to obtain the current status, whether it is about the registration approval or payment status. This method is not that convenient, as staff have to manually send emails instead of having an automated system on their website that segregates the status. Improvements are necessary to modernize this outdated system to enhance the efficiency of the processes.

3. Heavy Dependence on Human Resources

The existing manual system faces an issue as it heavily depends on human resources. All the steps starting from the registration and application for the loan are done manually. If the number of human resources decreases beyond a certain point, it will impact productivity and efficiency in the workplace. To address the issue of heavy dependence on human resources, the implementation of automation solutions is crucial as it can help streamline processes, minimise errors, and free up employees to focus on more strategic tasks that require human intervention.

4. Inefficient and human error

We know that retrieving and managing physical documents is time-consuming and the manual system heavily depends on human resources. This might lead to the chances of human error rising when staff forget to email the current status, missing payment receipts, or failing to gather customer information and also missing information. These inefficiencies will cause delays in service delivery and mistakes in data processing, affecting overall customer satisfaction and also

might disrupt the entire development process as incomplete or inaccurate data may result. Therefore, the company requires a more well-designed system.

5. Security Concerns of Manually Stored Customer Forms and Information

In the digital age, safeguarding customer information is paramount for maintaining trust and ensuring compliance with data protection regulations. The cooperative currently relies on manual storage of customer forms and information in physical cupboards. This method poses significant security risks that need urgent attention to protect sensitive data and uphold our commitment to customer privacy. As we can see, employees, cleaning staff, and visitors may easily access the cupboards, potentially leading to data breaches. Furthermore, it is challenging to track who accessed or modified the physical documents, making it difficult to audit and ensure the accountability of data handling practices.

iii) Proposed Solution

To address the inefficiencies and security concerns in Koperasi KADA's current manual system, we proposed a Koperasi KADA Online System that streamlines membership registration, loan application and administrative processes. This digital transformation will introduce automation, data security and real-time status tracking to enhance efficiency, reduce errors and improve overall user experience.

1. Digital Registration and Security Data Management

The new system will replace paper-based registration with an online membership registration portal that allows employees to apply digitally. Personal data will be securely stored in a centralized database with encryption and access controls to prevent unauthorized access. This eliminates the risk of misplaced documents and ensures that all records are easily retrievable.

2. Real-Time Status Tracking and Notifications

To solve the inconvenient status checking process, the proposed system will include an automated tracking feature. Members can log into the system to view their registration and loan application status in real-time. Automated email will inform users of approvals, pending documents or required actions, reducing delays and eliminating the need for manual communication by staff.

3. Error Reduction and Increase Efficiency

A structured database management system will replace manual record-keeping, reducing human errors in processing applications. Automated validation checks will ensure that required fields are completed correctly, preventing missing or inaccurate information from disrupting the workflow.

4. Enhanced Security and Compliance

The system will follow strict security protocols such as role-based access control, encryption and audit logs to protect sensitive customer information. Unlike physical document storage, which is prone to unauthorized access and data loss, the digital system will be backed up regularly to prevent data loss due to unforeseen events.

5. Update Financial Status

The new system will allow members to update their financial status directly on the platform. Members can securely log in to their profile. This automation will eliminate the need for manual intervention, ensuring faster and more accurate updates. Furthermore, the system will generate real-time reports for the admin and board directors, ensuring that all financial information is up-to-date for the decision-making process.

6. Manage Status

An essential feature of the new system is the status management tool, which will provide both members and staff with an easy-to-use dashboard to track the progress of registration, loan application and other requests. Members will be able to check their registration and loan application status directly on the website, without the need for manual follow-ups via phone or email. Automated notifications will inform members about status changes, such as registration approvals, loan disbursement or additional steps required. This system will ensure transparency and improve customer satisfaction by reducing wait times and uncertainties.

7. Approve Permohonan Berhenti

The new system will include an approval feature for leave applications for both members and employees. Staff can submit their leave requests electronically and the system will route them to the appropriate admin for approval. Admins will receive automatic reminders for pending approvals, helping to avoid delays and ensuring timely processing. This will reduce administrative burdens and enhance operational efficiency, particularly for managing employee leave requests.

8. Update Policy

The system will allow the admin to update internal policies related to membership, loan applications and other operational procedures. Members will be notified of policy changes directly through the platform, ensuring that they are always informed about any updates that may impact their registration or loan processes. This feature will enhance compliance and ensure that the system remains adaptable to changes in regulations, business strategies or customer needs.

By implementing the Koperasi KADA Online System, the company will increase efficiency, improve satisfaction, enhance security and reduce operational costs. This modernized approach will align Koperasi KADA with industry best practises, ensuring long-term sustainability and growth.

iv) Development Approach

In this WBL project, we followed the System Development Life Cycle (SDLC) as a framework for developing our system. The primary reason for adhering to this development cycle is to ensure the production of high-quality software while optimizing cost estimation, minimizing time consumption, and enhancing user experience. The SDLC consists of seven phases: identifying problems and planning, gathering requirements, analyzing system needs, designing the system, developing and documenting software, testing and maintaining the system, and finally, implementing and evaluating it.

The first phase, identifying problems and planning, involved an initial industry meeting with Koperasi KADA Kelantan. This meeting was held virtually in a video conferencing room at N28a in UTM, where we gained insights into their existing system's workflow. The current system operates in a manual, physical mode instead of a digital one. The organization expressed their desire for us to innovate and transform their current manually operated system into a fully digital system. Recognizing the challenges associated with a manually managed system, we documented key issues for reference. After the meeting, our team further discussed the system requirements and began drafting the system flow and framework based on the gathered information.

During the second phase, we focused on gathering client requirements. Although some requirements were collected during the initial meeting, we continued to refine and clarify our understanding throughout the development process by engaging in discussions with our client. All group leaders are in a group chat with the client, where any questions regarding the system were addressed promptly to ensure the system aligned with their expectations. Additionally, we collected various documents used in their current system, such as loan application forms, member registration forms, and financial report formats. From our findings, we discovered that the organization was handling all processes manually, which proved to be a heavy task for them. This manual approach not only resulted in an increased workload but also led to frequent human errors and unnecessary additional tasks.

Once we had a clear understanding of the system requirements, we moved on to the third phase which is analyzing system needs. Our team conducted multiple discussions to conceptualize the system and plan its workflow. We brainstormed ideas, proposed new functions, and features that should be implemented into the system and prepared a proposal outlining our system's design. During this phase, we held both face-to-face and online meetings via Google Meet to refine our use case diagram and design the entity-relationship diagram (ERD) for the database structure, ensuring that our system would have a well-defined data model.

The fourth phase involved designing the system. We created wireframes, user interface (UI) designs, user experience (UX) designs, and a normalized database design. To facilitate the design process, we primarily used Draw.io. Our team members collaborated closely, assisting each other in refining the designs. Throughout this process, we encountered numerous mistakes from the earlier SDLC phases, making multiple modifications to ensure the best database structure and relationships. By the end of this phase, we had a clear framework for the actual system we would develop.

In the fifth phase, software development began. Once all the designs were finalized, we started developing the system based on the modules outlined in the use case diagram which represented the core functionalities of our system. The system was built on a local server, and we established a timeline for completing each module to meet the project deadline. We utilized GitHub as our version control repository, enabling seamless collaboration. Through GitHub, we were able to merge our work efficiently, could track updates from team members in real-time using simple terminal commands. This method proved to be highly effective, especially when multiple team members were making changes and adding new files simultaneously. Instead of forwarding files manually, GitHub allowed us to integrate our work seamlessly.

Next, we entered the sixth phase which is testing and maintaining the system. Once coding was completed, we conducted thorough functionality tests to ensure each module operated correctly. We verified core system features such as member registration, loan applications, report generation, and status updates. If any errors or bugs were detected, they were immediately addressed and resolved by the team member responsible for that particular module. This thorough testing process allowed us to ensure the stability and reliability of our system before presenting it to the client.

Finally, we reached the last phase of the SDLC, implementation and evaluation. We attended a second online industry meeting with the Koperasi KADA representatives, where we presented the system's functionality. To make the session more efficient, each group was responsible for presenting one module only. During the meeting, the client provided feedback, suggestions, and necessary corrections. Based on this input, we proceeded to refine and enhance the system to fully meet the client's requirements.

v) Development Software, Language, Technology, API and Tools

Development Software

1. XAMPP Control Panel

The XAMPP Control Panel provides an easy way for programmers to work with Apache and MySQL. It acts as a local server, allowing users to test and run their websites in a secure environment before deploying them to live hosting.

2. Visual Studio Code

Visual Studio Code is a widely used source code editor. We leveraged it for debugging and task execution, as it offers a streamlined code-build-debug workflow, making the development process more efficient. The GitHub for version control repository also uses the Visual Studio Code.

3. Cursor

Cursor is a source code editor that we use for debugging and running tasks. Additionally, it features an AI-powered assistant that helps us resolve coding issues quickly by providing real-time suggestions and solutions.

4. Sublime Text

Sublime Text is also a text editor used for coding in various programming and markup languages. We utilized it to write and edit the code for our system efficiently.

Programming Languages Used

1. HTML

HyperText Markup Language (HTML) is the standard language used to create and structure web pages. It forms the foundation of our system's front-end design.

2. CSS

Cascading Style Sheets (CSS) define the presentation and styling of HTML elements across different media. It enables us to design visually appealing and responsive web pages.

3. JavaScript

JavaScript is a dynamic, text-based programming language that enhances web pages by enabling interactive functionalities such as form validation, animations, and event handling.

4. PHP

PHP (Hypertext Preprocessor) is a widely used server-side scripting language that allows us to develop both static and dynamic web pages. It plays a crucial role in handling data processing and server interactions.

5. SQL

Structured Query Language (SQL) facilitates communication with databases. We use SQL within phpMyAdmin to manage and manipulate our system's database efficiently.

6. Bootstrap

Bootstrap is a popular front-end framework that combines HTML, CSS, and JavaScript to create responsive and mobile-friendly web pages with a modern design.

Other Tools Used in the Project

1. GitHub

GitHub is a cloud-based platform for version control and collaboration. It enables our team members to work together on the project, track changes, and merge updates seamlessly.

2. Draw.io

Draw.io is a free online diagramming tool used to create Use Case Diagrams, activity diagrams, Entity-Relationship Diagrams (ERD), and sequence diagrams.

vi) Function/Module Explain

Member Module

1. Apply for Loan

To apply for a loan, user should first login into the system at the [login.php](#), after the validation by [loginprocess.php](#), it will proceed to the [mainpage.php](#). Users could see the Koperasi Kakitangan KADA page and at the header of the page, click the “**Perkhidmatan**” drop down box. Next, click on the “**Permohonan Pembiayaan**” button which will navigate users to the [permohonanloan.php](#). It is a digital form for users to apply for a loan. There are four sections, make sure to complete filling all the blanks before submitting or the website will pop-up a message telling the user that the form is incomplete.

The first section is personal information, the information is automatically filled as the data is stored in the database. Users can straight away click “**Seterusnya**” to the next section. If there are mistakes in the saved personal information, users could edit their information in their profile, I will explain it at the edit profile function later. After clicking “**Seterusnya**”, it will come to the second section, which is the bank and loan application information. Users should fill in the name of the bank, bank account number, type of loan, total loan and the loan period. The monthly installments (ansuran bulanan) is automatically calculated by the system in the [permohonanloan.php](#). Then proceed to the next section by clicking the “**Seterusnya**” again. Next, fill in the information of two guarantors (penjamin). Both guarantors must also have registered as a member of Koperasi Kakitangan KADA before being a guarantor to other users. If the guarantor keyed in is not a member yet, the system will prompt a message saying that a guarantor must be a member first. After that, proceed to another section and fill in the “**pengesahan majikan**” form. Fill in the name of the director, user’s salary and upload the user’s payment slip that has already been signed by the director.

Lastly, read and tick all the three rules before submitting the form. If there are blank spaces in any of the sections, the system will prompt an error message and users should check the form again. If successful submitting, system will prompt a message for users to go to the view loan application status page, [statuspermohonanloan.php](#), users can check on their real time status or

click the “**Lihat**”, view button to review the details of each loan application here. Any updates on the application status from the admin will be shown here in this page.2.

2. View Loan Application Status

First of all, user must also login into the members page first at [login.php](#) page. After validation by [loginprocess.php](#), it will proceed to [mainpage.php](#). In this main page, click the “**profil**” at the header on the right-hand-top-corner of the page. It will then proceed to [profil.php](#) which is the profile page of the user. After entering this profile page, click on the “**Status Permohonan**” button on the left-hand-side menu bar. It will navigate the user to the [status.php](#) to check on the status. There are two categories which are the loan application status (Status Pembiayaan) and member registration status (Status Ahli). Choose and click on the first one, “**Status Pembiayaan**” to view the loan application status. The page will then proceed to [statuspermohonanloan.php](#), user can view the status here and all the updates on approval will be shown here. Apart from that, user can click on the “**Lihat**” button and the page will proceed to the [lihatStatus.php](#) to view the details and past application information here.

3. Manage Profile

Users should first login into the system at the [login.php](#), after the validation by [loginprocess.php](#), it will proceed to the [mainpage.php](#). Users could see the Koperasi Kakitangan KADA page and at the header of the page, click the “**profil**” at the header on the right-hand-top-corner of the page. It will then proceed to [profil.php](#) which is the profile page of the user. At the profile page, scroll down until the user sees a “**Kemaskini**” button. Click on the edit button and user can now edit their personal information and details at the same page which is the [profile.php](#) page. After the user has completed editing, user should click on the “**Simpan**” button to save the edited information. After clicking the “**Simpan**” button, the website will pop-up a message asking the user whether to confirm the changes made. Click “**OK**” if confirmed or “**Cancel**” if there are still changes that need to be made. The changes made will then be saved into the system’s database.

4. View Financial Status

First of all, user must also login into the members page first at [login.php](#) page. After validation by [loginprocess.php](#), it will proceed to [mainpage.php](#). In this main page, click the “**profil**” at the header on the right-hand-top-corner of the page. It will then proceed to [profil.php](#) which is the profile page of the user. After entering this profile page, click on the “Penyata Kewangan” button on the left-hand-side menu bar to proceed to the [penyatakewangan.php](#) page. On the [penyatakewangan.php](#) page, users can view their financial statement in a structured and organized manner. The page displays key financial details, including total savings (**Jumlah Simpanan**) and total loan amount (**Jumlah Pinjaman**). Each section is updated in real time, ensuring users have the most recent financial information.

In the “**Jumlah Simpanan**” section, users can see their account number and last updated timestamp, while in the “**Jumlah Pinjaman**” section, they can view the loan amount, loan type, and update status.

The button section in the middle part, users can navigate through different financial records. The first one is the “**Rekod Transaksi**”. This button leads to the transaction history page, [transaction_history.php](#) where users can review all past deposits, withdrawals, and payments by choosing the year or month they would like to view.

Next, beside the record transaction, there is a “**Penyata Bulanan**” section button. This button will lead to [monthly_statements.php](#). It provides a monthly financial statement, summarizing transactions and financial status over a specific period. Users could search by month in any year using the drop down list.

The third section button is the “**Penyata Kewangan**” button leading the system to the [financial_statement.php](#). This option likely refreshes the current page and provides an in-depth breakdown of overall financial details. Below the page, there is a “**Cetak**” button. Users can click that button to print out the statement.

Further down, two detailed sections display. There is a “**Butiran Simpanan**” displaying a breakdown of different savings categories, such as **Modal Saham** (Share Capital), **Modal Yuran** (Membership Fees), **Simpanan Tetap** (Fixed Savings), **Tabung Anggota** (Member Fund) and **Wang Deposit** (Deposit Money) of the user.

Continue with the **“Butiran Pinjaman”** section. It is a summary of the user's loan details, including loan type (eg. **Al-Bai**) and the current repayment status (e.g., RM 22,222.00 / RM 22,222.00).

5. Generate Report

This module is handled by admin only. The admin can generate the report in [hasilreport.php](#). Only applications either member or loan that are already approved by admin in [senaraiPermohonanAhli.php](#) and [senaraiPermohonanPinjaman.php](#) can be shown in the table.

When first entering it, admin is prompt to choose what type of report to generate, which are indicated by 4 different radio buttons: **“Ahli”**, **“Pembiayaan”**, **“Bulanan”** and **“Tahunan”**. Member statements showcase each member's ID, PF number and IC number. Loan statements showcase the loan application ID, loan type, loan amount requested, loan duration, monthly installments and application date. The monthly report summarizes new member registrations and loan applications for each month, while the yearly report provides an overview of the entire year. Next, the admin is prompted to choose which date period of the applications to generate for the report. Then the admin can select members or loans to be generated into a report. Lastly, the admin presses the **“Hasil Laporan”** button to generate a report. A confirmation prompt will appear to confirm the data selected, then admin will press **“Ya”** to proceed to [adminviewreport.php](#).

In this page there are 3 sections: **“Cek Laporan”**, **“Ringkasan Laporan”** and **“Perincian Tahunan”**. The **“Cek Laporan”** shows the report of member application and loan application. **“Ringkasan Laporan”** shows the Koperasi KADA monthly report while **“Perincian Tahunan”** shows the yearly report. They are presented in table form for better view. Admin can press the **“Lihat Penyata”** button to view the report in the form of modal or another page. Beside the button is a download icon that allows admin to download into a pdf file. At the end of each table is a **“Padam”** button which allows the admin to delete the selected row entry. The bottom page has a **“Kembali”** button to direct admin back to [hasilreport.php](#) if they want to create more reports.

vii) System Credentials (Hosting)

InfinityFree is a free hosting service that hosts the Online KADA System. Our domain name is set up as **koperasikada.great-site.net** (Figure 7.1). InfinityFree offers an SSL certificate by Google Trust Service (Figure 7.2) for safe HTTPS connections. InfinityFree control panel, cpanel.infinityfree.com provides access to a SQL database service for database management (Figure 7.3) and an online file manager for file management (Figure 7.4), is used for hosting management. The php files are uploaded into the online file manager, which are maintained in our Git repository. All credentials, including database login information are saved in phpMyAdmin, while the database connections are configured through `dbconnect.php` (Figure 7.5).

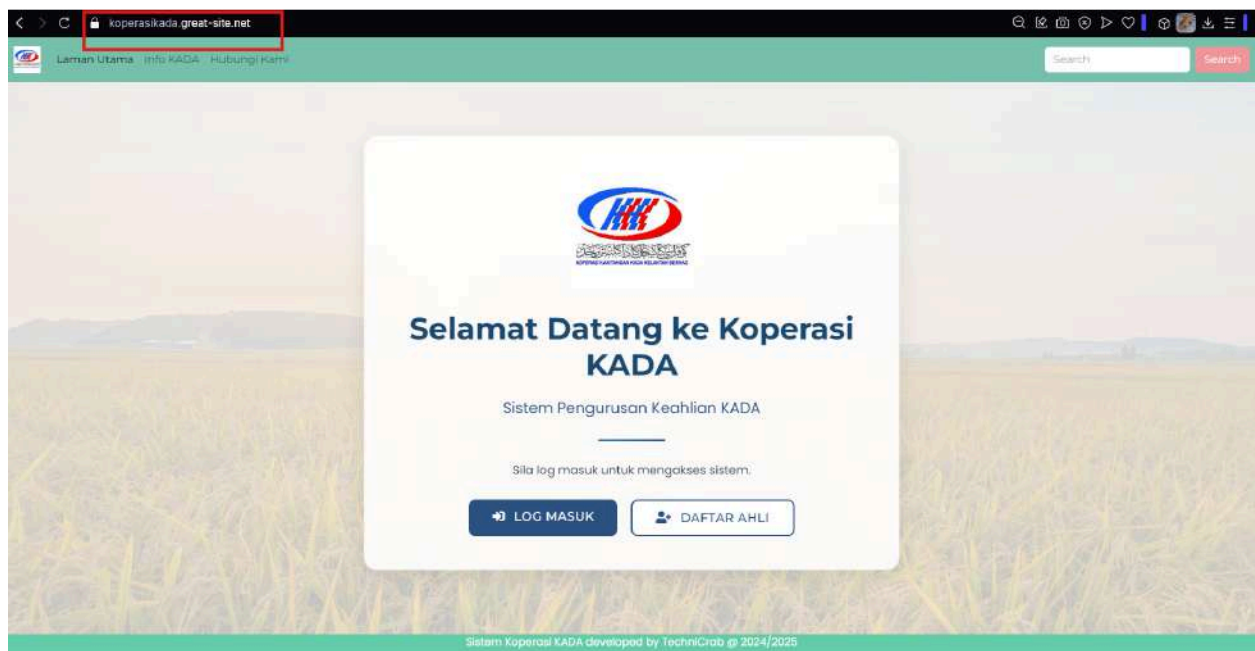

Figure 7.1

viii) Localhost Setup

For localhost setup, we installed XAMPP as our local server environment (Figure 8.1). The XAMPP Control Panel offers services for Git, MySQL, and Apache. In order to facilitate collaboration during the development phase, this setup enables us to run our project's local files on the web server and the phpMyAdmin database, db_kada (Figure 8.2), as well as connect to our team's Git repository (Figure 8.3) for file handling operations like update and fetching processes. Every project files are placed in the htdocs/Kada folder (Figure 8.4), the Apache and MySQL services are started from the XAMPP Control Panel, and the project can be accessed via the browser at **localhost/kada/** (Figure 8.5). The database connections are configured through dbconnect.php (Figure 8.6).

Navigation Bar

The screenshot shows the top navigation bar of the Koperasi Kakitangan KADA website. The bar is green and contains the following links: KADA Ahli, Laman Utama, Perkhidmatan, and Hubungi Kami. A bell icon and the word 'Profil' are on the right. A dropdown menu is open under 'Perkhidmatan', showing options: Permohonan Anggota, Berang Permohonan (highlighted), Status Permohonan, Permohonan Pembiayaan, and Permohonan Berhenti Menjadi Anggota. Below the navigation bar is a large white box with the Koperasi Kakitangan KADA logo and the text 'KOPERASI KAKITANGAN KADA'. Below this, there are three sections: NAMA BERDAFTAR (KOPERASI KAKITANGAN KADA SDN BHD), NO. PENDAFTARAN (IP5429/1), and TARIKH DAFTAR (29 June 1981).

Member Registration Form Page

The screenshot shows the 'MAKLUMAT PERIBADI' (Personal Information) section of the member registration form. The form is titled 'Langkah 12: Permohonan Menjadi Anggota'. It contains the following fields and labels:

- Nama Penuh ***: Text input field. Below it, a note says 'Sila pastikan NAMA PENUH seperti dalam kad pengenalan.'
- Alamat Emel ***: Text input field. Below it, a note says 'Sila pastikan ALAMAT EMEL adalah sah dan masih aktif.'
- MyKad/No. Passport ***: Text input field. Below it, a note says 'Masukkan 12 digit nombor kad pengenalan tanpa (-)'. Example: 890126012345.
- Taraf Perkahwinan ***: Dropdown menu with 'Sila Pilih' and a downward arrow.
- Alamat Rumah ***: Text input field.
- Poskod ***: Text input field.
- Negeri ***: Dropdown menu with 'Sila Pilih' and a downward arrow.
- Jantina ***: Radio buttons for 'Lelaki' and 'Perempuan'.
- Agama ***: Dropdown menu with 'Sila Pilih' and a downward arrow.

Test Case

Object 1: Member Application

Case No	Equivalence Class	Representative (BVA)	Expected Result
TC001_01	Valid employeeID	No repeated 4-digits value Example: 1236, 6359, 6358	The system accepts the employeeID
TC001_02	Invalid employeeID	Negative value of integer	The system reject the employeeID
TC001_03		Value 0	
TC001_04		String with letters Example: ABCD, I125	
TC002_01	Valid memberName	Name consists of alphabet and	The system accepts the

		symbols such as “/”, “@” Example: Ali bin Abu, ALI@Abu, lim A/P lu	memberName
TC002_02	Invalid memberName	Name contain numbers Example: Hani126	The system reject the memberName
TC002_03		Name contains special symbols only Example: ###	
TC003_01	Valid ic	Correct format: 6-digit birthdate, a hyphen, 2-digit state code, a hyphen, 4-digit unique number Example: 120911-10-1065	The system accepts the ic
TC003_02	Invalid ic	Missing hyphens Example: 120911101065	The system reject the ic
TC003_03		Invalid birthdate Example: 996105-30-9635	
TC004_01	Valid email	Email consists of @ and a valid domain Example: user@gmail.com	The system accepts the email
TC004_02	Invalid email	Email that missing @ or a valid domain Example: user@.com, test@	The system reject the email
TC005_01	Valid maritalStatus	Option from the available dropdown list Example: “Bujang”, “Berkahwin”, “Duda/Janda”	The system accepts the maritalStatus
TC006_01	Valid sex	Only “Perempuan” or “Lelaki” from radio button are accepted	The system accepts the sex
TC007_01	Valid religion	Option from the available dropdown list Example: "Islam", "Buddha", "Hindu", "Kristian"	The system accepts the religion
TC008_01	Valid nation	Option from the available dropdown list Example: "Islam", "Buddha", "Hindu", "Kristian"	The system accepts the nation
TC009_01	Valid no_pf	Valid 4-digit personal file numbers	The system accepts the

		Example: 6635,9635,0563	no_pf
TC009_02	Invalid no_pf	More than 4 digits or contains letters/special characters Example: 89635, 59@df, hsidsd	The system reject no_pf
TC010_01	Valid phoneNumber	Valid Malaysian mobile number format Example: 0123456789, 01136593689	The system accepts the phoneNumber
TC010_02	Invalid phoneNumber	Too short, contains letters, or invalid format Example: 0000, 223sdd, 223@hjd	The system reject phoneNumber
TC011_01	Valid phoneHome	Valid landline format with area code Example: 078614984, 063368369	The system accepts the phoneHome
TC011_02	Invalid phoneHome	Invalid or non-numeric Example: 000000000, 0365ghjk1	The system reject phoneHome
TC012_01	Valid monthlySalary	Positive numerical salary values Example: 10000,6335	The system accepts the monthlySalary
TC012_02	Inalid monthlySalary	Zero salary or contains non-numeric characters Example: 0000, 256ss, ewfef@225	The system reject monthlySalary
TC013_01	Valid homeAddress	Properly formatted addresses Example: 123, Jalan Merdeka, Taman Bahagia	The system accepts the homeAddress
TC013_02	Invalid homeAddress	Symbols, too short, or empty Example: #####, A, “ ”	The system reject homeAddress
TC014_01	Valid homePostcode	Valid 5-digit Malaysian postal codes Example: 50000,93900, 81800	The system accepts the homePostcode
TC014_02	Invalid homePostcode	Letters, too few digits, or invalid codes Example: ABCDE, 1234, 00000	The system reject homePostcode
TC015_01	Valid homeState	Recognized Malaysian states Example: "Johor", "Kedah", "Kelantan", "Melaka", "Negeri Sembilan", "Pahang", "Perak", "Perlis", "Selangor", "Terengganu", "Sabah", "Sarawak", "WP Kuala	The system accepts the homeState

		Lumpur", "WP Putrajaya", "WP Labuan"	
TC016_01	Valid officeAddress	Properly formatted addresses Example: 123, Jalan Merdeka, Taman Bahagia	The system accepts the officeAddress
TC016_02	Invalid officeAddress	Symbols, too short, or empty Example: #####, A, “ ”	The system reject officeAddress
TC017_01	Valid officePostcode	Valid 5-digit Malaysian postal codes Example: 50000,93900, 81800	The system accepts the officePostcode
TC017_02	Invalid officePostcode	Letters, too few digits, or invalid codes Example: ABCDE, 1234, 00000	The system reject officePostcode
TC018_01	Valid officeState	Recognized Malaysian states Example: "Johor", "Kedah", "Kelantan", "Melaka", "Negeri Sembilan", "Pahang", "Perak", "Perlis", "Selangor", "Terengganu", "Sabah", "Sarawak", "WP Kuala Lumpur", "WP Putrajaya", "WP Labuan"	The system accepts the officestate
TC019_01	Valid relationship	Option available from the dropdown list Example: Isteri, Suami, Anak, Ibu, Bapa, Adik-beradik	The system accepts the relationship
TC020_01	Valid name	Name consists of alphabet and symbols such as “/”, “@” Example: Ali bin Abu, ALI@Abu, lim A/P lu	The system accepts the name
TC020_02	Invalid name	Name contain numbers Example: Hani126	The system rejects name
TC020_03		Name contains special symbols only Example: ###	
TC021_01	Valid icFamilyMember	Correct format: 6-digit birthdate, a hyphen, 2-digit state code, a hyphen, 4-digit unique number Example: 120911-10-1065	The system accepts the icFamilyMember
TC021_02	Invalid	Missing hyphens	The system rejects

	icFamilyMember	Example: 120911101065	icFamilyMember
TC021_03		Invalid birthdate Example: 996105-30-9635	
TC022_01	Valid entryfee	Lower boundary valid value Example: 50	The system accepts the entryfee
TC022_02		Typical valid value Example: 100	
TC022_03	Invalid entryfee	Minimum invalid value Example: 0	The system rejects entryfee
TC022_04		Negative invalid value Example: -50	
TC022_05		Non-numeric string Example: ABC	
TC022_06		Empty input Example: “ ”	
TC023_01	Valid modalShare	Lower boundary valid value Example: 300	The system accepts the modalShare
TC023_02		Typical valid value Example: 500	
TC023_03		Upper boundary valid value Example: 99999999999	
TC023_04	Invalid modalShare	Minimum invalid value Example: 0	The system rejects modalShare
TC023_05		Negative invalid value Example: -50	
TC023_06		Non-numeric string Example: ABC	
TC023_07		Empty input Example: “ ”	
TC023_08		Just below the valid range Example: 299	
TC024_01	Valid feeCapital	Lower boundary valid value Example: 35	The system accepts the feeCapital

TC024_02		Typical valid value Example: 500	
TC024_03		Upper boundary valid value Example: 99999999999	
TC024_04	Invalid feeCapital	Minimum invalid value Example: 0	The system rejects feeCapital
TC024_05		Negative invalid value Example: -50	
TC024_06		Non-numeric string Example: ABC	
TC024_07		Empty input Example: “ ”	
TC024_08		Just below the valid range Example: 35	
TC025_01	Valid deposit	Lower boundary valid value Example: 25	The system accepts the deposit
TC025_02		Typical valid value Example: 500	
TC025_03		Upper boundary valid value Example: 99999999999	
TC025_04	Invalid deposit	Minimum invalid value Example: 0	The system rejects deposit
TC025_05		Negative invalid value Example: -50	
TC025_06		Non-numeric string Example: ABC	
TC025_07		Empty input Example: “ ”	
TC025_08		Just below the valid range Example: 24	
TC026_01	Valid contribution	Lower boundary valid value Example: 300	The system accepts the contribution
TC026_02		Typical valid value	

		Example: 25	
TC026_03		Upper boundary valid value Example: 99999999999	
TC026_04	Invalid contribution	Minimum invalid value Example: 0	The system rejects contribution
TC026_05		Negative invalid value Example: -50	
TC026_06		Non-numeric string Example: ABC	
TC026_07		Empty input Example: “ ”	
TC026_08		Just below the valid range Example: 25	
TC027_01	Valid fixeddeposit	Lower boundary valid value Example: 25	The system accepts the fixeddeposit
TC027_02		Typical valid value Example: 500	
TC027_03		Upper boundary valid value Example: 99999999999	
TC027_04	Invalid fixeddeposit	Minimum invalid value Example: 0	The system rejects fixeddeposit
TC027_05		Negative invalid value Example: -50	
TC027_06		Non-numeric string Example: ABC	
TC027_07		Empty input Example: “ ”	
TC027_08		Just below the valid range Example: 24	

Object 2: Loan Application

Case No	Equivalence Class	Representative (BVA)	Expected Result
TC028_01	Valid loanType	Option available from the dropdown list Example: “AL-BAI”, “AL-INAH”, “SKIM KHAS”, “KARNIVAL MUSIM ISTIMEWA”, “BAIK PULIH KENDERAAN”, “CUKAI JALAN”	The system accepts the loanType
TC029_01	Valid amountRequest	Lower boundary valid value Example: 1000	The system accepts the amountRequest
TC029_02		Typical valid value Example: 6000	
TC029_03		Upper boundary valid value Example:20000	
TC029_04	Invalid amountRequest	Minimum invalid value Example: 0	The system rejects amountRequest
TC029_05		Negative invalid value Example: -50	
TC029_06		Non-numeric string Example: ABC	
TC029_07		Empty input Example: “ ”	
TC030_01	Valid financingPeriod	Lower boundary valid value Example: 12	The system accepts the financingPeriod
TC030_02		Typical valid value Example: 25	
TC030_03		Upper boundary valid value Example:72	
TC030_04	Invalid financingPeriod	Negative value Example: -6	The system rejects financingPeriod
TC030_05		Decimal Value Example: 6.3	

TC031_01	Valid employerName	Name consists of alphabet and symbols such as “/”, “@” Example: Ali bin Abu, ALI@Abu, lim A/P lu	The system accepts the employerName
TC031_02	Invalid employerName	Name contain numbers Example: Hani126	The system rejects employerName
TC031_03		Name contains special symbols only Example: ###	
TC032_01	Valid employerIC	Correct format: 6-digit birthdate, a hyphen, 2-digit state code, a hyphen, 4-digit unique number Example: 120911-10-1065	The system accepts the employerIC
TC032_02	Invalid employerIC	Missing hyphens Example: 120911101065	The system rejects employerIC
TC032_03		Invalid birthdate Example: 996105-30-9635	
TC033_01	Valid BasicSalary	Integer number Example: 10000,6395	The system accepts the BasicSalary
TC033_02	Invalid BasicSalary	Zero value Example: 0	The system rejects BasicSalary
TC033_03		Alphanumeric input Example: 53d63	
TC034_01	Valid netSalary	Integer number Example: 10000,6395	The system accepts the netSalary
TC034_02	Invalid netSalary	Zero value Example: 0	The system rejects netSalary
TC034_03		Alphanumeric input Example: 53d63	
TC035_01	Valid netSalaryFile	Valid .pdf file Example: Payslip.pdf	The system accepts the netSalaryFile
TC035_02	Invalid netSalaryFile	Invalid file type Example: Payslip.jpg	The system rejects netSalaryFile
TC036_01	Valid guarantorName	Name consists of alphabet and symbols such as “/”, “@”	The system accepts the guarantorName

		Example: Ali bin Abu, ALI@Abu, lim A/P lu	
TC036_02	Invalid guarantorName	Name contain numbers Example: Hani126	The system rejects guarantorName
TC036_03		Name contains special symbols only Example: ###	
TC037_01	Valid guarantorIC	Correct format: 6-digit birthdate, a hyphen, 2-digit state code, a hyphen, 4-digit unique number Example: 120911-10-1065	The system accepts the guarantorIC
TC037_02	Invalid guarantorIC	Missing hyphens Example: 120911101065	The system rejects guarantorIC
TC037_03		Invalid birthdate Example: 996105-30-9635	
TC038_01	Valid guaantorPFNo	Valid 4-digit personal file numbers Example: 6635,9635,0563	The system accepts the guaantorPF No
TC038_02	Invalid guaantorPFNo	More than 4 digits or contains letters/special characters Example: 89635, 59@df, hsidsd	The system rejects guaantorPF No
TC039_01	Valid guarantorPhone	Valid Malaysian mobile number format Example: 0123456789, 01136593689	The system accepts the guarantorPhone
TC039_02	InvalidguarantorPhone	Too short, contains letters, or invalid format Example: 0000, 223sdd, 223@hjd	The system rejects guarantorPhone
TC040_01	Valid guarantorMemberNo	No repeated 4-digits value Example: 1236, 6359, 6358	The system accepts the guarantorMemberNo
TC040_02	Invalid guarantorMemberNo	Negative value of integer	The system rejects guarantorMemberNo
TC040_03		Value 0	
TC040_04		String with letters Example: ABCD, I125	

Object 3: Terminate the Membership

Case No	Equivalence Class	Representative (BVA)	Expected Result
TC041_01	Valid reason	Normal sentences Example: Detail reason	The system accepts the reason
TC041_02		Full sentences Example: The payment was delayed due to a system error.	
TC041_03		Short but meaningful Example: Personal financial issue.	
TC041_04	Invalid reason	Special characters only Example: @#\$%^	The system rejects the reason
TC041_05		Only numbers Example: 566921	
TC041_06		Combination of letters and special characters without meaning Example: hjkikwndqh@	
TC041_07		Too short Example: A	
TC041_08		Empty string or whitespace	

Object 4: Manage Profile

Case No	Equivalence Class	Representative (BVA)	Expected Result
TC042_01	Valid email	Email consists of @ and a valid domain Example: user@gmail.com	The system accepts the email
TC042_02	Invalid email	Email that missing @ or a valid domain Example: user@.com, test@	The system reject the email
TC043_01	Valid maritalStatus	Option from the available dropdown list Example: “Bujang”, “Berkahwin”,	The system accepts the maritalStatus

		“Duda/Janda”	
TC044_01	Valid religion	Option from the available dropdown list Example: "Islam", "Buddha", "Hindu", "Kristian"	The system accepts the religion
TC045_01	Valid nation	Option from the available dropdown list Example: "Islam", "Buddha", "Hindu", "Kristian"	The system accepts the nation
TC046_01	Valid phoneNumber	Valid Malaysian mobile number format Example: 0123456789, 01136593689	The system accepts the phoneNumber
TC046_02	Invalid phoneNumber	Too short, contains letters, or invalid format Example: 0000, 223sdd, 223@hjd	The system reject phoneNumber
TC047_01	Valid homeAddress	Properly formatted addresses Example: 123, Jalan Merdeka, Taman Bahagia	The system accepts the homeAddress
TC047_02	Invalid homeAddress	Symbols, too short, or empty Example: #####, A, “ ”	The system reject homeAddress
TC048_01	Valid homePostcode	Valid 5-digit Malaysian postal codes Example: 50000, 93900, 81800	The system accepts the homePostcode
TC048_02	Invalid homePostcode	Letters, too few digits, or invalid codes Example: ABCDE, 1234, 00000	The system reject homePostcode
TC049_01	Valid homeState	Recognized Malaysian states Example: "Johor", "Kedah", "Kelantan", "Melaka", "Negeri Sembilan", "Pahang", "Perak", "Perlis", "Selangor", "Terengganu", "Sabah", "Sarawak", "WP Kuala Lumpur", "WP Putrajaya", "WP Labuan"	The system accepts the homeState
TC050_01	Valid officeAddress	Properly formatted addresses Example: 123, Jalan Merdeka, Taman Bahagia	The system accepts the officeAddress

TC050_02	Invalid officeAddress	Symbols, too short, or empty Example: #####, A, “ ”	The system reject officeAddress
TC051_01	Valid officePostcode	Valid 5-digit Malaysian postal codes Example: 50000,93900, 81800	The system accepts the officePostcode
TC051_02	Invalid officePostcode	Letters, too few digits, or invalid codes Example: ABCDE, 1234, 00000	The system reject officePostcode
TC052_01	Valid officeState	Recognized Malaysian states Example: "Johor", "Kedah", "Kelantan", "Melaka", "Negeri Sembilan", "Pahang", "Perak", "Perlis", "Selangor", "Terengganu", "Sabah", "Sarawak", "WP Kuala Lumpur", "WP Putrajaya", "WP Labuan"	The system accepts the officestate
TC053_01	Valid relationship	Option available from the dropdown list Example: Isteri, Suami, Anak, Ibu, Bapa, Adik-beradik	The system accepts the relationship
TC054_01	Valid name	Name consists of alphabet and symbols such as “/”, “@” Example: Ali bin Abu, ALI@Abu, lim A/P lu	The system accepts the name
TC054_02	Invalid name	Name contain numbers Example: Hani126	The system rejects name
TC054_03		Name contains special symbols only Example: ###	
TC055_01	Valid icFamilyMember	Correct format: 6-digit birthdate, a hyphen, 2-digit state code, a hyphen, 4-digit unique number Example: 120911-10-1065	The system accepts the icFamilyMember
TC055_02	Invalid icFamilyMember	Missing hyphens Example: 120911101065	The system rejects icFamilyMember
TC055_03		Invalid birthdate Example: 996105-30-9635	
TC056_01	Valid password	Meet all criteria (minimum 8 characters, and include uppercase	The system accepts the password

		letters, lowercase letters, numbers, and special characters) Example: La@0324l	
TC056_02	Invalid Password	Less than 8 characters Example: La@563	The system rejects the password
TC056_03		No lowercase, no numbers, no special characters Example: ABCDEFG	
TC056_04		No letters Example: 5336@633	
TC056_05		No letters, no numbers Example: @#\$%^**@	
TC056_06		No special characters Example: Lala040503	
TC056_07		No uppercase letter Example: onldc@478	

Object 5: Update Policy

Case No	Equivalence Class	Representative (BVA)	Expected Result
TC057_01	Valid rate	Valid integer rate Example: 10	The system accepts the rate
TC057_02		Valid decimal rate Example: 6.2	
TC057_03	Invalid rate	Negative rate Example: -6.3	The system rejects the rate
		Rate contains non-numeric characters or special characters Example: ABC, jjd@, 53#	
		Rate contains only special characters Example: \$%^&	

xi) UAT Reports

Objective

The objective of this UAT is to validate that the Kopersi KADA Online System meets the business and user requirements before deployment. The test ensures that the system functions as expected in real-world usage scenarios.

Scope

This UAT covers all key features, including

- User authentication
- User membership registration
- Loan application
- Financial status updates
- Report generation by admin
- System security and performance

The testing was conducted by my team members.

Test ID	Test Scenario	Expected Outcome	Actual Outcome	Status (Pass/Fail)	Comments
UAT-01	User Authentication	The user should be able to log in with valid credentials	Successfully logged in	Pass	-
UAT-02	User Registration	The user should be able to register successfully	Successfully registered	Pass	-
UAT-03	View Registration Status	The user should see the real-time registration status	Status displayed correctly	Pass	-
UAT-04	Loan Application Submission	The user should be able to submit a loan request	Loan request submitted	Pass	-
UAT-05	View Loan Status	The user should see real-time loan	Status displayed correctly	Pass	-

		status			
UAT-06	Terminate Membership Application Submission	The user should be able to submit a termination membership request	Termination membership request submitted	Pass	-
UAT-07	View Termination Application Status	The user should see the real-time termination application status	Status displayed correctly	Pass	-
UAT-08	View Financial Status	The financial status is displayed accurately	Financial Status is shown correctly	Pass	-
UAT-09	Edit Profile	The user can successfully edit and save profile changes	The profile is edited and managed correctly	Pass	-
UAT-10	Add Family Member Info	The user can successfully add and save it changes	The family member info is added	Pass	-
UAT-11	Change the Password	The user can change the password and save successfully	The password was changed and saved successfully	Pass	-
UAT-12	Admin Report Generation	Admin can generate reports based on loan and user data	Reports generated correctly	Pass	-
UAT-13	Security Test	The system should prevent unauthorized access	Unauthorized access blocked	Pass	-
UAT-14	Performance Test	The system should handle multiple users without lag	Handled load efficiently	Pass	-

User Feedback

Positive Feedback

- Users found the loan status tracking useful.
- The UI is simple and easy to navigate.
- The automated notifications improved communication

Suggestion for improvement

- Improve loading speed for report generation

Conclusion

The UAT was successfully conducted, with all critical functionalities passing the tests. Minor issues were identified and resolved. Users provided valuable feedback for future improvements

I, hereby CHERYL CHEONG KAH VOON, agree that the Koperasi KADA Online system developed by group Technicrab has fulfilled the minimum requirement function of the system that was requested by the client.
